

Case History

enbloc
clean facilities

Client : Avecia, Billingham

Enbloc's Role Design and Build as Principle Contractor
Scope Multidiscipline - M&E + Construction
Facility Type Grade C Modular Bulk Fill Facility
Floor Area 60m²
Approximate Contract Value £250k
Programme 8 months

Project Description :

Through negotiation on Enbloc's Partnership scheme, the contract for Avecia's new modular bulk fill facility was a welcome challenge for Enbloc. Avecia required an extension to their ABC2000 plant to match visually both internally and externally. The brief included a preference for the extension to be modular and, therefore, built and fitted-out off site. Enbloc designed a painted steel module to match the existing grey facades. The unit was fitted-out off-site (up to 70% complete) meaning on-site works were quickly finished once hook-ups were completed.

Key Points :

Custom made to meet client's exacting requirements
Seamless integration into client existing facility

Portable cleanroom being trucked to site with panel walls, electrics, pipe work and HVAC already installed

New modular building being craned into position finished to match existing building
