

Case study

Singleton Hospital – Swansea

New modular aseptic and radiopharmacy facility

The details

Our role:

Design and Build
Principle Contractors

Scope:

Full Turnkey including
provision of Isolators

Facility type:

Grade C&D Aseptic and
Radiopharmacy

Floor area:

400m²

Contract value:

£1.9m

Enbloc were chosen to provide a full turnkey design and build facility as Principle Contractor. The facility consists of modules which were manufactured off-site and craned into place. This approach had the advantage of shortening and minimising works on-site while the addition of brick fascia's to the modules meant the new extension blended well with the surrounding buildings.

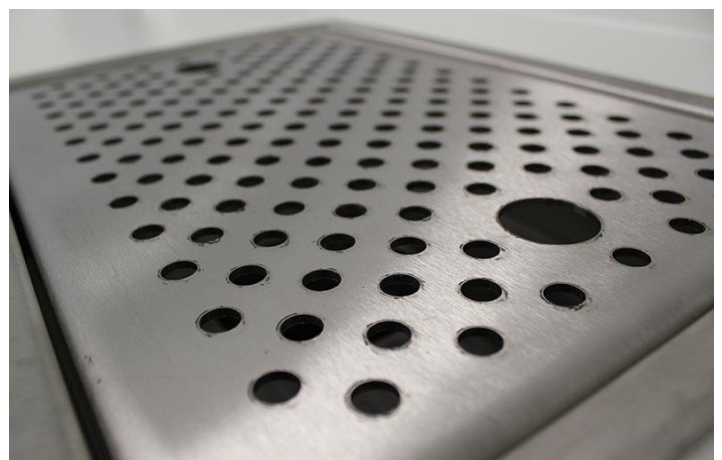

New facilities accommodate the preparation and manufacture of chemotherapy, preparation and manufacture of TPN, CIVA and nuclear medicines, QC, assembly and release of materials and finished products and the storage of materials.

The new facility provides the user groups with modern, flexible, well designed accommodation, compliant with MHRA design requirements regarding layout and content for licensed aseptic manufacturing.
