

## Cleanroom Deep Clean

### Deep Clean of National Health Service Blood and Transplant Cleanrooms

**Role: Deep Cleaning contractors**

**Scope: Deep clean of 4no. ISO 14644-1:2015 Classification 5 cleanrooms and associated change areas and corridor, following routine maintenance and validation works.**

Enbloc were contacted by the cleanrooms head of department to carry out a full deep clean of 4no. cleanrooms, their associated change and materials air locks, the main corridor and the main change room.

The walls, floors and ceilings were cleaned using mop heads pre-saturated in Beta. The laminar flow cabinets, microbiological safety cabinets, laboratory benching and other process equipment were cleaned using IPA 70/30.

On completion of the deep clean, the client performed micro-biological validation and found the results to be “excellent”. The client is now looking at having Enbloc perform routine deep cleaning.
